# Installing Octave on GNU/Linux

## Installing Octave on GNU/Linux

We recommend using your system package manager to install Octave.

On Ubuntu, you can use:

- `sudo apt-get update && sudo apt-get install octave`

On Fedora, you can use:

- `sudo yum install octave-forge`

Please consult the Octave maintainer's instructions for other GNU/Linux systems.

**"Warning:** Do not install Octave 4.0.0"; checkout the "Resources" menu's section of "Installation Issues".
