Hypothesis: 
$$h_{\theta}(x) = \theta_{0} + \theta_{1}x$$
 $\theta_{i}$ 's: Parameters

How to choose  $\theta_i$ 's ?

$$h_{\theta}(x) = \theta_0 + \theta_1 x$$

Machine Learning

# Linear regression with one variable

# Cost function intuition I

#### Simplified Hypothesis:

$$h_{\theta}(x) = \theta_0 + \theta_1 x$$

Parameters:

 $\theta_0, \theta_1$ 

Cost Function:
$$J(\theta_0, \theta_1) = \frac{1}{2m} \sum_{i=1}^{m} \left( h_{\theta}(x^{(i)}) - y^{(i)} \right)^2$$

Goal: minimize  $J(\theta_0, \theta_1)$ 

$$\theta_1$$
 $h(x)$ 

 $h_{\theta}(x) = \theta_1 x$ 

minimize  $J(\theta_1)$ 

 $J(\theta_1) = \sum_{i=1}^{m} \left( h_{\theta}(x^{(i)}) - y^{(i)} \right)^2$ 

The cost function is (1/2m)\*(sum of squares of errors). Since we have m points, there will be m error values, one corresponding to each point. The 1/m averages the errors and the 1/2 is included so that when we differentiate the function, it cancels out

Machine Learning

## Linear regression with one variable

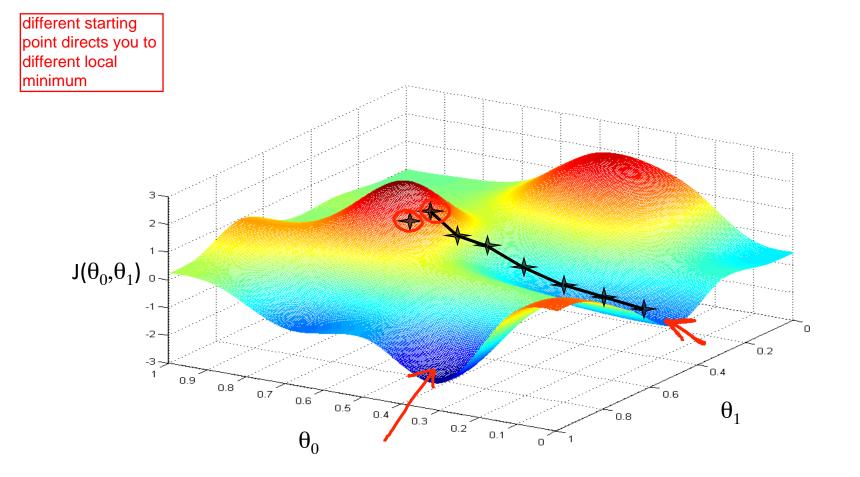

# Gradient descent

Have some function 
$$J(\theta_0,\theta_1)$$
  $J(\theta_0,\theta_1)$   $J(\theta_0,\theta_1)$ 

#### **Outline:**

- Start with some  $\theta_0, \theta_1$  ( Say  $\Theta_0 = 0, \Theta_1 = 0$ )
- Keep changing  $\underline{\theta_0},\underline{\theta_1}$  to reduce  $\underline{J(\theta_0,\theta_1)}$  until we hopefully end up at a minimum

### **Gradient descent algorithm**

 $J(\theta_0, \theta_1)$ 

repeat until convergence {

tearning rate

Assignment

$$(\text{for } j = 0 \text{ and } j = 1)$$

- $\rightarrow \text{temp0} := \theta_0 \alpha \frac{\partial}{\partial \theta_0} J(\theta_0, \theta_1)$
- $\rightarrow$  temp1 :=  $\theta_1 \alpha \frac{\partial}{\partial \theta_1} J(\theta_0, \theta_1)$
- $\rightarrow \theta_0 := \text{temp}0$
- $\rightarrow \theta_1 := \text{temp1}$

### Incorrect:

$$\operatorname{emp0} := \theta_0 - \alpha$$

- $\rightarrow \text{temp0} := \theta_0 \alpha \frac{\partial}{\partial \theta_0} J(\theta_0, \theta_1)$
- $\rightarrow (\theta_0) := \text{temp} 0$ 
  - $temp1 := \theta_1 \alpha \frac{\partial}{\partial \theta_1} J(\theta_0, \theta_1)$
- $\rightarrow \overline{\theta_1 := \text{temp1}}$

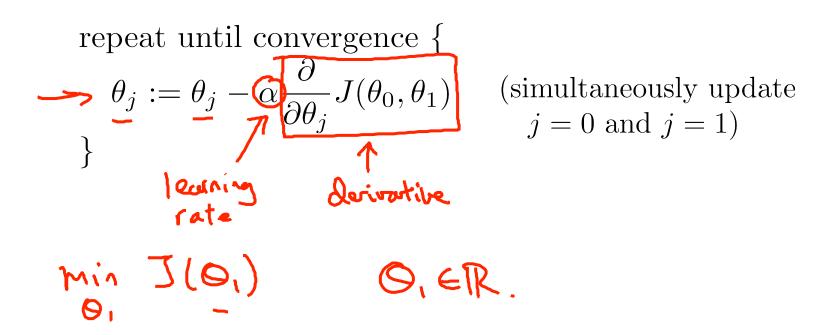

Machine Learning

# Linear regression with one variable

Gradient descent intuition

### **Gradient descent algorithm**

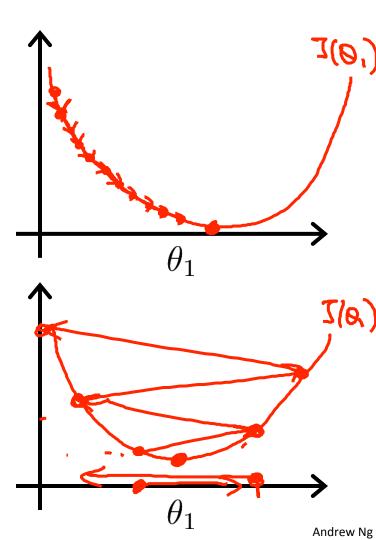

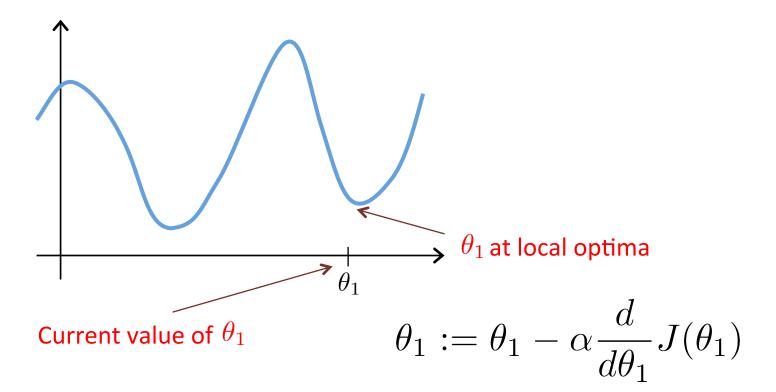

Andrew Ng

$$\theta_1 := \theta_1 - \bigcirc \frac{\partial}{\partial \theta_1} J(\theta_1)$$

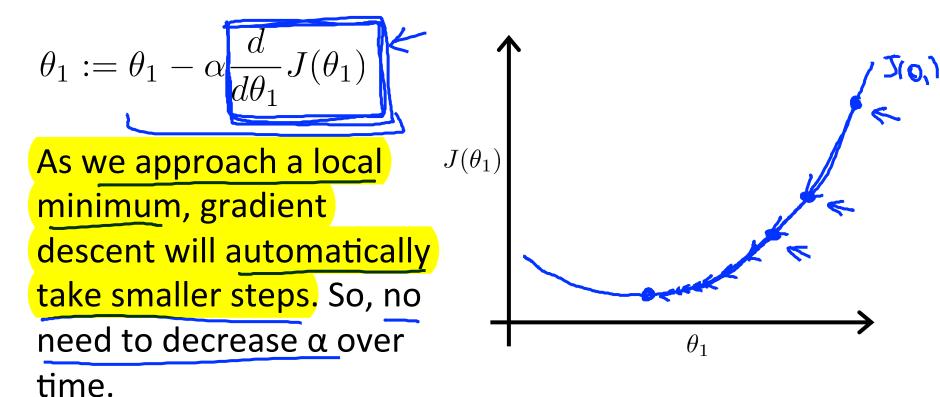

If  $\alpha$  is too small, gradient descent can be slow.

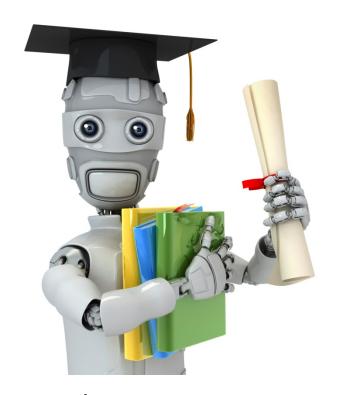

If  $\alpha$  is too large, gradient descent can overshoot the minimum. It may fail to converge, or even diverge.

Gradient descent can converge to a local minimum, even with the learning rate  $\alpha$  fixed.

Machine Learning

# Linear regression with one variable

Gradient descent for linear regression

#### Gradient descent algorithm

repeat until convergence {  $\theta_j := \theta_j - \alpha \frac{\partial}{\partial \theta_j} J(\theta_0, \theta_1)$ 

(for j = 1 and j = 0)

#### **Linear Regression Model**

$$h_{\theta}(x) = \theta_0 + \theta_1 x$$

$$J(\theta_0, \theta_1) = \frac{1}{2m} \sum_{i=1}^{m} \left( h_{\theta}(x^{(i)}) - y^{(i)} \right)^2$$

$$\frac{\partial}{\partial \theta_{j}} J(\theta_{0}, \theta_{1}) = \frac{2}{30j} \underbrace{\frac{1}{2m}}_{\text{in}} \underbrace{\frac{2}{5} \left( h_{0}(x^{(i)}) - y^{(i)} \right)^{2}}_{\text{in}}$$

$$= \underbrace{\frac{2}{30j}}_{\text{in}} \underbrace{\frac{2}{5} \left( 0. + 0. x^{(i)} - y^{(i)} \right)^{2}}_{\text{in}}$$

$$j = 0: \frac{\partial}{\partial \theta_0} J(\theta_0, \theta_1) = \frac{1}{m} \stackrel{\text{def}}{=} \left( h_{\bullet} \left( \chi^{(i)} \right) - y^{(i)} \right)$$

$$j = 1: \frac{\partial}{\partial \theta_1} J(\theta_0, \theta_1) = \frac{1}{m} \stackrel{\text{def}}{=} \left( h_{\bullet} \left( \chi^{(i)} \right) - y^{(i)} \right). \quad \chi^{(i)}$$

**Gradient descent algorithm** 

repeat until convergence {

$$\theta_0 := \theta_0 - \alpha \frac{1}{m} \sum_{i=1}^m \left( h_{\theta}(x^{(i)}) - y^{(i)} \right)$$

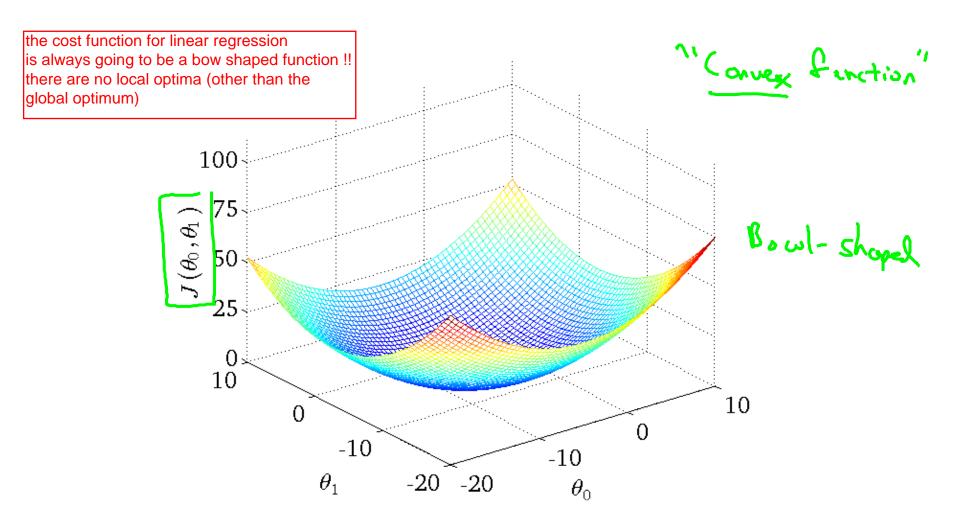

$$\theta_1 := \theta_1 - \alpha \frac{1}{m} \sum_{i=1}^m \left( h_{\theta}(x^{(i)}) - y^{(i)} \right) \cdot x^{(i)}$$

update  $\theta_0$  and  $\theta_1$  simultaneously
